

LAB 1: AI-ASSISTED CITATION INTEGRITY AUDIT

Generate a Research Paper with AI, Then Audit Its Citations

AI Tools for Research • 2 Hours • Individual Activity • Topic IDs T1-T40

Student Detail	Fill in
Name	Jahanvi Mishra
Roll Number	MNS2026004
Programme / Department	M.TECH IT (Network Systems and Computing)
Topic ID	10
Full Assigned Topic	Designing Verification Checkpoints to Mitigate Silent Errors in Agentic AI Pipelines
AI Tool Used	ChatGPT
Date	21/08/26

IMPORTANT: You will receive a topic from T1-T40. Your task is not to produce the “best” paper. Your task is to generate an AI-written research paper and systematically determine whether its citations can be trusted.

1. PURPOSE OF THIS LAB

Generative AI systems can produce research papers that look scholarly and may contain convincing references, author names, journal titles, DOIs, arXiv IDs, and in-text citations. However, the presence of a citation does not guarantee that the cited publication actually exists, that its metadata are correct, that the identifier belongs to that publication, or that the cited paper supports the statement made by the AI.

In this laboratory activity, you will test these issues yourself by generating a research paper and auditing a systematic sample of its references.

Question 1 - Citation Authenticity: Does the cited publication actually exist, and is it correctly identified?

Question 2 - Claim-Citation Support: If the publication is genuine, does it actually support the claim for which the AI cited it?

2. IMPORTANT RULES

- Use only the topic assigned to you by the instructor.
- Generate the paper in a fresh AI conversation.
- Do not tell the AI that you are conducting a citation audit or hallucination test.
- Do not intentionally ask the AI to generate fake references.
- Preserve the original AI-generated paper exactly as produced.
- Do not correct, regenerate, replace, or question references before saving the original output.
- For verification, do not accept another AI chatbot's statement as proof that a reference exists.
- Use scholarly databases, publisher pages, DOI/arXiv/PMID records, or other reliable scholarly sources.
- Record what you actually find, even if all references are genuine or all are problematic.

Most important principle: You are not being evaluated on whether the AI produces good or bad references. You are being evaluated on how systematically and correctly you audit them.

3. WHAT YOU WILL DO

Part	Activity
A	Record your baseline perception of AI citations

B	Record the AI environment used
C	Generate and preserve an AI-written research paper
D	Create a reference inventory
E	Select 10 references systematically
F	Judge their plausibility before verification
G	Verify authenticity, metadata and identifiers
H	Determine whether genuine references support the AI-generated claims

4. RECOMMENDED 2-HOUR TIME PLAN

Time	Activity
0-10 min	Parts A-B: Baseline and AI environment
10-30 min	Part C: Generate and save research paper
30-40 min	Parts D-E: Inventory and select references
40-45 min	Part F: Pre-verification plausibility
45-80 min	Part G: Authenticity and metadata audit
80-110 min	Part H: Claim-citation entailment audit
110-120 min	Calculate scores, check worksheet and prepare submission

Do not spend excessive time formatting the AI-generated paper. The audit is the main activity.

PART A - BASELINE ASSESSMENT

Complete this section BEFORE opening the AI tool.

A1. How often do you use generative AI for academic work?

☐ Never ☐ Rarely ☐ Occasionally ☐ Weekly ☒ Almost daily

A2. Have you previously asked an AI system to generate references?

☐ Frequently ☒ Occasionally ☐ Once or twice ☐ Never

A3. Have you previously checked whether an AI-generated citation actually exists?

☒ Always ☐ Sometimes ☐ Rarely ☐ Never ☐ Not applicable

A4. Before this lab, how confident are you that citations generated by AI are generally reliable?

☐ 1 ☐ 2 ☐ 3 ☒ 4 ☐ 5 (1 = not at all confident; 5 = completely confident)

Important: Do not change this answer later, even if your opinion changes during the experiment.

PART B - RECORD YOUR AI ENVIRONMENT

Information	Your Response
AI tool used	
Model name	
Model/version shown	
Access tier	☒ Free ☐ Paid/Pro ☐ Institutional ☐ Not sure
Web browsing available?	☒ Yes ☐ No ☐ Not sure
Was web browsing actually used?	☒ Yes ☐ No ☐ Not sure
Research/Deep Research mode used?	☒ Yes ☐ No
Date/time generated	

Important: If the model/version is not displayed, write NOT SHOWN. Do not guess the model version.

PART C - GENERATE THE AI RESEARCH PAPER

C1. Open a Fresh AI Conversation

Do not tell the AI that this is a citation audit, that you are testing hallucinations, or that you expect fabricated references. We want to observe normal AI research-paper generation behaviour.

C2. Use the Following Common Prompt

Replace only [YOUR ASSIGNED TOPIC].

Generate a scholarly research paper on the topic: “[YOUR ASSIGNED TOPIC]”. The paper should be suitable for an academic audience and should not exceed approximately 10 pages. Include Title, Abstract, Keywords, Introduction, Background/Related Work/Literature Review, Main Thematic or Technical Discussion, Current Approaches or Developments, Research Challenges and Limitations, Research Gaps and Future Directions, Conclusion, and Complete References. Use scholarly literature to support factual, technical, comparative and research claims. Provide in-text citations throughout the paper. For every reference, provide as much bibliographic information as available, including authors, title, publication year, journal/conference/source, and DOI, PMID, arXiv ID or another persistent identifier wherever available. Use genuine scholarly sources. Do not intentionally fabricate references.

C3. Preserve the Original Output

- ☒ Save the complete AI-generated paper
- ☒ Save the complete reference list
- ☒ Take screenshot(s) showing the generated output/references
- ☒ Save conversation/export/share evidence if available
- **Added at last (generated paper , reference list , screenshots)**

STOP: Do not ask the AI to correct or verify anything yet. Your original output is the experimental evidence.

PART D - PAPER PROFILE AND REFERENCE INVENTORY

Paper title: Designing Verification Checkpoints to Mitigate Silent Errors in Agentic AI Pipelines

Measure	Value
Approximate pages	9
Approximate word count	5500
Number of sections	11
Total number of references	17
Approximate in-text citation occurrences	35
Did AI warn you to verify references?	☐ Clearly ☐ Vaguely ☒ No

D1. Reference Inventory

Classify every reference once using the best available identifier in this priority order: DOI -> PMID -> arXiv ID -> URL only -> No persistent identifier. The category totals must equal the total number of references in the AI-generated paper.

Reference Type	Count
DOI available	17
PMID available, no DOI	0
arXiv ID available, no DOI/PMID	0

URL only	0
No persistent identifier supplied	0
TOTAL	17

Examples

Category	Example	How to Count
DOI available	Kather, J. N., et al. (2019). Predicting survival from colorectal cancer histology slides using deep learning. PLoS Medicine. DOI: 10.1371/journal.pmed.1002730	DOI available
PMID available, no DOI	A biomedical paper for which the AI provides PMID: 12345678, but no DOI is supplied/found	PMID available, no DOI
arXiv ID available	Yao, S., et al. ReAct: Synergizing Reasoning and Acting in Language Models. arXiv:2210.03629	arXiv ID available
URL only	World Health Organization. Colorectal cancer. Available at: https://... with no DOI, PMID or arXiv ID	URL only
No persistent identifier	Goodfellow, I., Bengio, Y., & Courville, A. (2016). Deep Learning. MIT Press.	No persistent identifier if none is supplied

Important: Absence of a DOI does not mean a reference is fake. An identifier being present also does not prove authenticity; it must be checked.

PART E - SELECT 10 REFERENCES FOR AUDIT

You are not allowed to choose only suspicious-looking references. This prevents selection bias.

If the bibliography contains 10 or fewer references: audit all references.

If it contains more than 10 references: select the first 3 references, the last 3 references, and 4 references approximately evenly distributed through the middle.

Example: If there are 28 references, a reasonable sample could be 1, 2, 3, 8, 13, 18, 23, 26, 27, 28.

Audit Slot	Original Bibliography Reference No.
R1	1
R2	2
R3	3
R4	4
R5	6
R6	7
R7	10
R8	13
R9	14
R10	16

Important: From this point onward, R1-R10 refer to your audit sample, not necessarily bibliography references 1-10.

PART F - PLAUSIBILITY TEST

Do this BEFORE searching for any reference.

Look only at the citation as generated by the AI. Ask yourself: “If I had not verified this citation, how convincing would it look to me?”

Score	Meaning
-------	---------

1	Obviously suspicious
2	Somewhat suspicious
3	Unsure
4	Looks genuine
5	Completely convincing

Ref.	Initial Impression	Plausibility 1-5	Predict Genuine?
R1	Well-known AI topic, recognizable authors	4	Yes
R2	Professional-looking citation with established authors	4	Yes
R3	Detailed multi-author citation with a plausible title, year, and persistent identifier.	5	Yes
R4	Looks like a formal benchmark paper with many authors	4	Yes
R5	Recent survey citation with a formal ACL venue and detailed author information.	5	Yes
R6	Well-formatted paper	4	Yes
R7	A bit suspicious name and doubt in relation to topic	3	No
R8	Established-looking journal citation with volume, pages, and DOI.	5	Yes
R9	Professional-looking EMNLP citation with recognizable format and identifier.	4	Yes
R10	Professional-looking citation with established authors	4	Yes

Example: A citation with realistic authors, a well-known journal, complete volume/pages and a DOI-like identifier may look highly convincing. You might record Plausibility = 5 and Predict Genuine = Yes. You are recording your pre-verification belief, not the truth.

Critical rule: Never change Part F after completing Part G. Your incorrect predictions are valuable experimental observations.

PART G - CITATION AUTHENTICITY AND METADATA AUDIT

G1. What Are You Checking?

- Does the publication exist?
- Is the title correct?
- Are the authors correct?
- Is the year correct?
- Is the journal/conference/source correct?
- Are volume, issue and pages correct, if supplied?
- Does the DOI/arXiv/PMID belong to this publication?

G2. Verification Procedure

☒ Persistent identifier: DOI / arXiv / PMID

☒ Publisher or official repository

☐ Google Scholar

☒ Semantic Scholar / OpenAlex

☐ Crossref☐ PubMed or another discipline-specific database☒ Exact-title search☒ Author + title-keyword search

Not acceptable as sole evidence: “I asked another AI and it said the paper exists.” AI can help you search, but final verification must rely on scholarly or publisher evidence.

G3. Assign One A-E Code

Code	Classification	Meaning
A	VERIFIED	Publication exists and important metadata are correct.
B	WRONG METADATA	Publication exists, but one or more bibliographic details are incorrect.
C	FRANKENSTEIN	Real-looking pieces are combined, but that specific publication does not exist.
D	FABRICATED	No reliable scholarly evidence that the publication exists.
E	IDENTIFIER MISMATCH	DOI/arXiv/PMID is invalid or resolves to a different publication.

G4. Examples

A: AI gives a paper and all details match the publisher record.

B: The paper exists, but the AI gives the wrong publication year or journal.

C: The authors are real, the journal is real, and the topic is plausible, but no such paper with that title/authorship combination exists.

D: You cannot find the paper or a credible scholarly record after systematic searching.

E: The DOI supplied by AI opens an entirely different paper or does not resolve.

G5. Record Your Evidence

Ref.	Publication Found?	Title Match?	Authors Match?	Year Match?	Venue Match?	Identifier Match?
R1	Y	Y	Y	Y	Y	Y
R2	Y	Y	Y	Y	Y	Y
R3	Y	Y	N	Y	Y	Y
R4	Y	Y	Y	Y	Y	Y
R5	Y	Y	Y	Y	N	NA
R6	Y	Y	N	Y	Y	Y
R7	Y	Y	Y	Y	Y	Y
R8	Y	Y	Y	Y	Y	Y
R9	Y	Y	Y	Y	Y	Y
R10	Y	Y	Y	Y	Y	Y

Ref.	Verification Source(s)	Identifier Checked	What You Found
R1	arXiv; official ICLR/OpenReview record	arXiv:2210.03629; DOI: 10.48550/arXiv.2210.03629	Publication exists and title, authors, year, venue, and identifier match.
R2	arXiv	arXiv:2302.04761; DOI: 10.48550/arXiv.2302.04761	Publication exists and all important metadata match.
R3	arXiv	arXiv:2308.08155; DOI: 10.48550/arXiv.2308.08155	Publication and identifier exist, but the bibliography's author list does not fully match the official record.
R4	OpenReview / ICLR	arXiv:2308.03688; DOI: 10.48550/arXiv.2308.03688	Publication exists and important metadata match.
R5	arXiv	arXiv:2507.21504; DOI: 10.48550/arXiv.2507.21504	Publication exists and title, authors, year, and identifier match.
R6	ACL Anthology	No persistent identifier supplied in original bibliography	Publication exists, but author and venue metadata in the bibliography are incorrect/incomplete.

R7	arXiv	arXiv:2305.20050; DOI: 10.48550/arXiv.2305.20050	Publication exists and important metadata match.
R8	ACL Anthology	DOI: 10.18653/v1/2024.eacl-demo.16	Publication exists and title, authors, year, venue, pages, and DOI match.
R9	arXiv	arXiv:2306.05685; DOI: 10.48550/arXiv.2306.05685	Publication exists and important metadata match.
R10	arXiv; ACL Anthology	arXiv:2202.03286; DOI: 10.48550/arXiv.2202.03286	Publication exists and the supplied title, authors, year, venue, and arXiv identifier match.

G6. Final Classification

Ref.	Final Code	One-Line Reason
R1	A	Publication and metadata fully match.
R2	A	All key metadata details match.
R3	B	Author list does not fully match.
R4	A	Publication and metadata fully match.
R5	A	All key metadata details match.
R6	B	Author and venue details differ.
R7	A	Publication and identifier metadata match.
R8	A	All bibliographic details match correctly.
R9	A	Publication and metadata fully match.
R10	A	Publication and identifier metadata match

Good reason: B: Article exists, but AI reported 2022 instead of 2020.

Poor reason: B: Details wrong.

PART G - SCORING

Count your final classifications: A = 8 B = 2 C = 0 D = 0 E = 0

Total audited: N = A + B + C + D + E = 10

Code	Points
A	4
B	3
C	1
D	0
E	1

Authenticity Points = $4A + 3B + C + E$

Authenticity Score = $[(4A + 3B + C + E) / (4N)] \times 100$

My calculation: $4(8) + 3(2) + 1(0) + 0(0) + 1(0) = 38$ points

Authenticity Score = $38 / (4 \times 10) \times 100 = 95/100$

Worked example: If A=6, B=2, C=1, D=1, E=0, then points = $4(6)+3(2)+1(1)=31$; maximum = 40; Authenticity Score = $31/40 \times 100 = 77.5$.

Score	Interpretation
90-100	Excellent authenticity
75-89	Good, minor concerns
60-74	Moderate citation-authenticity risk
40-59	High citation-authenticity risk
Below 40	Very high citation-authenticity risk

G7. Prediction Accuracy

Compare your Part F Genuine Yes/No predictions with the Part G results.

Prediction Accuracy = (Correct genuine/fake predictions / Total predictions) x 100

Correct predictions = 9 Total predictions = 10 Prediction Accuracy =90%

FINAL LAB 1 RESULTS

Measure	Your Result
Total references in AI paper	17
References deeply audited	10
A: Verified	8
B: Wrong metadata	2
C: Frankenstein	0
D: Fabricated	0
E: Identifier mismatch	0
Authenticity Score	95/100
Prediction Accuracy	____ %

FINAL INTERPRETATION

1. Did professional-looking citations necessarily turn out to be genuine?

No. Professional-looking formatting alone is not enough to prove that a citation is completely accurate. In this audit, all selected publications existed, but two references contained incorrect or incomplete bibliographic metadata. Therefore, a citation may look convincing while still containing factual errors.

2. Did all genuine references actually support the claims for which they were cited?

Citation authenticity and claim support are different issues. A source can genuinely exist but still be cited inaccurately or used to support a claim that goes beyond what the source demonstrates. Therefore, the existence of a genuine publication does not automatically prove that it fully supports every claim made using that citation.

3. What was the most serious citation-integrity problem you observed?

The most serious problem observed was wrong or incomplete metadata in references to genuine publications. For example, the AutoGen reference had an incomplete author list, while the survey on evaluation of LLM-based agents contained author and venue inaccuracies. Such errors could make it difficult for readers to accurately identify and verify the original source.

4. What is the single most important lesson you learned from this lab?

The most important lesson is that a citation should never be trusted only because it looks professional or because the source exists. Each citation must be checked for both bibliographic accuracy and whether the source actually supports the claim for which it is cited.

SUBMISSION INSTRUCTIONS

Submit one PDF: Lab1_RollNumber_Name

Example: Lab1_IEC2026001_RahulSharma

STUDENT DECLARATION

I confirm that I generated the research paper using the recorded AI environment, preserved the original output before conducting the audit, followed the prescribed reference-selection procedure, and personally verified the evidence reported in this worksheet. I have not altered my pre-verification predictions after seeing the verification results.

Student Name: JAHANVI MISHRA

Roll Number: MNS2026004

Signature: JAHANVI MISHRA

Date: 21/08/26

CENTRAL LESSON OF LAB 1

Does the source exist? + Does the source actually support the claim?

AI Generation -> Reference Inventory -> Systematic Sampling -> Prediction -> Authenticity Verification -> Claim-Support
Verification -> Quantitative Scores -> Submission
